Subject: **Application for the position of Junior Analytics Engineer (permanent contract)**

Dear Hiring Manager,

As a graduate of the Master's programme in Big Data & Business Intelligence at Université Sorbonne Paris Nord, I would like to put my skills in **Data Engineering** and **Business Intelligence** to work for your company as a **Junior Analytics Engineer**. This role is a natural next step in my career path, combining data transformation, modeling, and turning information into value for business teams.

During my six-month internship at Colas Digital Solutions, I worked on **12 Data Analysis assignments** of varying length and complexity, as well as on **a large-scale Data Engineering project**. This variety helped me develop real versatility, strong adaptability and a cross-functional view of data challenges. In particular, I designed **ingestion and transformation pipelines with Databricks and Azure Data Factory**, built on a Bronze, Silver and Gold medallion architecture. I also contributed to data modeling, to the development of **Power BI dashboards** and to improving BI quality and governance.

My experience as a Data Consultant at DrNIKO / TECHNIKO helped me develop a business-oriented approach, from analyzing needs to formulating concrete recommendations. I also had the opportunity to mentor engineering students from ESTP and EFREI during a hackathon organized by Colas, where the team I coached won **first place**. These experiences strengthened my analytical skills, my team spirit and my ability to communicate with a wide range of stakeholders.

Rigorous, curious and a good team player, I am now looking to join a team where I can contribute to data reliability, build robust analytical solutions and keep growing technically. I would be glad to commit my skills and energy to your data projects **over the long term**.

I would welcome the opportunity to discuss my background and motivation with you in an interview. Thank you for your time and consideration.

Yours sincerely,

Philippe ROUMBO
