Subject: **Application for a Junior Analytics Engineer position**

Dear Hiring Manager,

I am currently completing the final year of a Master's degree in Big Data & Business Intelligence at Sorbonne Paris Nord University, alongside a data internship at Colas Digital Solutions. I would like to join your team as a **Junior Analytics Engineer** on a permanent contract. This role, at the crossroads of data engineering and BI, matches exactly what I do every day and what I enjoy most.

At Colas Digital Solutions, I designed **ingestion and transformation pipelines on Databricks and Azure Data Factory**, structured around a Bronze, Silver and Gold medallion architecture. I wrote transformations in **Scala** and **SQL**, set up **consistency and completeness checks** to make the data reliable, and industrialized changes with **Azure DevOps (CI/CD)**. At the end of the chain, I built data models and **Power BI** dashboards used by business teams. I also led a proof of concept to improve the governance of BI reports.

My data consulting internship at DrNIKO / TECHNIKO taught me to start from the client's needs: framing a problem, building benchmarks and scoring grids, then presenting clear recommendations to both technical and non-technical stakeholders. I applied the same approach when coaching engineering student teams from ESTP and EFREI during the Colas hackathon, where the team I supported won **1st place**.

Committed to data quality, curious and comfortable working in an Agile environment, I am eager to bring these skills to your data projects while continuing to grow alongside your teams. You can find my background and work on my portfolio.

I would welcome the opportunity to discuss my application with you in an interview. Thank you for your time and consideration.

Yours sincerely,
Philippe ROUMBO
